Pre-upgrade check	6
Run preupgrd.sql	6
Check invalid objects	7
Run preupgrade_fixups.sql	8
Gather dictionary stats	
Invoke DBUA	11
Checking during upgrade process	17
Upgrade Results	
Post upgrade steps	25
Modify .bash_profile	
Copy tnsnames.ora from 11g to 12c	26
Modify listener.ora from GI_HOME if necessary	27
remove password file of 12c and copy password from 11g1	28
Compile invalid objects	28

Upgrade Path

Source Database	Upgrade Path	Target Database
7.3.3 (lower)	7.3.4> 9.2.0.8> 10.2.0.5	12.1.x
8.0.5 (or lower)	8.0.6> 9.2.0.8> 10.2.0.5	12.1.x
8.1.7 (or lower)	8.1.7.4> 10.2.0.5	12.1.x
9.0.1.3 (or lower)	9.0.1.4> 10.2.0.5	12.1.x
9.2.0.7 (or lower)	10.2.0.5	12.1.x
10.2.0.4 (or lower)	10.2.0.5	12.1.x
11.1.0.6	11.1.0.7	12.1.x
11.2.0.1	11.2.0.2	12.1.x

Recommendations for Source database

- 1) Ensure that all database components/objects provided by Oracle are VALID in the source database prior to starting the upgrade.
- 2) Ensure that you do not have duplicate objects in the SYS and SYSTEM schema. For 1 and 2 refer to:

Note 556610.1 Script to Collect DB Upgrade/Migrate Diagnostic Information (dbupgdiag.sql) dbupgdiag.sql script is a set of sql statements intended to provide a user friendly output to diagnose the status of the database either before (or) after upgrade. The script will create a output file called db_upg_diag_<sid>_<timestamp>.log

- 3) Disable the custom triggers that would fire before/after DDL and enable them after the upgrade is complete.
- 4) Either take a Cold or Hot backup of your source database (advisable to have cold backup).
- 5) Check the database server upgrade/downgrade compatibility matrix before upgrading the database.
- 6) Set Archive Log ON during upgrade. Oracle recommends that you set Archive Log ON in order for DBUA to create and update the log file for the upgrade process.

- 7) For Oracle RAC, if you upgrade a cluster database using DBUA, then you must leave the CLUSTER_DATABASE initialization parameter set to TRUE.
- 8) Ensure to run the pre-upgrade utility prior to upgrading the database. The script is available in the 12c ORACLE_HOME/rdbms/admin named preupgrd.sql. Refer to 12c documentation for complete details.:

Oracle Database Upgrade Guide 12c Release 1 (12.1) E17642-10 2 Preparing to Upgrade Oracle Database

- 2.5 About the Pre-Upgrade Information Tool for Oracle Database
- 9) If mitigation patch is applied at source database, it would have disabled Java. Enable it before performing upgrade to avoid java related error

Database Upgrade failed with Errors "ORA-02290: check constraint (SYS.JAVA_DEV_DISABLED) violated" & "ORA-04045: SYS.DBMS_ISCHED" (Doc ID 1985725.1)

- 10) Materialized views in source database should be stopped before upgrade

 How to Handle Materialized Views When You Upgrade or Clone a Database (Doc ID 1406586.1)
- 11) Disable scheduled custom jobs
- 12) Before starting the Database Upgrade Assistant it is required change the preference for 'concurrent statistics gathering' on the current release if the current setting is not set to 'FALSE'

First, while still on the 11.2. release, obtain the current setting:

SQL> SELECT dbms_stats.get_prefs('CONCURRENT') from dual;

When 'concurrent statistics gathering' is not not set to 'FALSE', change the value to 'FALSE before the upgrade.

BEGIN

```
DBMS_STATS.SET_GLOBAL_PREFS('CONCURRENT','FALSE');
END;
/
```

13) Run the Pre-Upgrade Information Tool for Collecting Pre-Upgrade Information from 12c ORACLE_HOME

\$ORACLE_HOME/rdbms/admin/preupgrd.sql \$ sqlplus '/ as sysdba' SQL> spool upgrade_info.log SQL> @preupgrd.sql SQL> spool off 14) Check for INVALID database components and objects in the Source database select substr(comp_name,1,40) comp_name, status, substr(version,1,10) version from dba_registry order by comp_name;

select substr(object_name,1,40) object_name,substr(owner,1,15) owner,object_type from dba_objects where status='INVALID' order by owner,object_type;

select owner,object_type,count(*) from dba_objects where status='INVALID' group by owner,object_type order by owner,object_type;

15) Disable Oracle Database Vault

You must do this before upgrading the database. Enable Oracle Database Vault again once the upgrade is complete.

Reference:

Note 453903.1 Enabling and Disabling Oracle Database Vault in UNIX Note 453902.1 How To Enable And/Or Disable Oracle Database Vault

16) Audit records

From 10gr2 DBUA/catupgrd script can spend an infinite time to process the records in FGA_LOG\$ and/or AUD\$ if there are too many records

See:

Note1062993.1 11.2.0.1 Catupgrd.sql Hangs While Running Procedure POPULATE_DBID_AUDIT For 10.2 and later source versions there is now a pre-process script available:

Note 1329590.1 How to Pre-Process SYS.AUD\$ Records Pre-Upgrade From 10.1 or later to 11gR1 or later.

If do not want to keep the records collected before 12cR1 then you can just do in source environment (READ PREVIOUS NOTES before proceeding):

SQL> truncate table sys.aud\$;

SQL> truncate table sys.fga_log\$;

17) Enterprise Manager Database Control

sql> connect / as sysdba

sql> spool emremoval.log

sql>@emremove.sql

sql> spool off

18) Oracle Warehouse Builder

OWB is not installed as part of the software for Oracle Database 12c, and OWB components that may exist in earlier releases are not upgraded as part of the Oracle Database upgrade process. However, you can use OWB release 11.2.0.3 with Oracle Database 12c. Note that OWB releases earlier than release 11.2.0.3 do not work with Oracle Database 12c

19) Oracle Label Security

If you are upgrading from a database earlier than Oracle Database release 12.1 that uses Oracle Label Security (OLS) and Database Vault, then you must first run the OLS preprocess script, olspreupgrade.sql, to process the aud\$ table contents. The OLS upgrade moves the aud\$ table from the SYSTEM schema to the SYS schema. The olspreupgrade.sql script is a preprocessing script required for this move

Pre-upgrade check

Run preupgrd.sql

[oracle@ohs3 -]\$ cd /pgold/ordb/oracle/product/121/rdbms/admin
[oracle@ohs3 admin]\$ sqlplus / as sysdba

Executing in container PROD

Check Tag: EM_PRESENT

Check Summary: Check if Enterprise Manager is present Fix Summary: Execute emremove.sql prior to upgrade.

Fixup Returned Information: WARNING: --> Enterprise Manager Database Control repository found in the database In Oracle Database 12c, Database Control is removed during the upgrade. To save time during the Upgrade, this action can be done prior to upgrading using the following steps after copying rdbms/admin/emremove.sql from the new Oracle home - Stop EM Database Control: \$> emctl stop dbconsole - Connect to the Database using the SYS account AS SYSDBA: SET ECHO ON: SET SERVEROUTPUT ON; @emremove.sql Without the set echo and serveroutput commands you will not be able to follow the progress of the script. ****************** Check Tag: AMD_EXISTS Check Summary: Check to see if AMD is present in the database Fix Summary: Manually execute ORACLE_HOME/oraolap/admin/catnoamd.sql script to remove OLAP. ****************** Fixup Returned Information: INFORMATION: --> OLAP Catalog(AMD) exists in database Starting with Oracle Database 12c, OLAP Catalog component is desupported. If you are not using the OLAP Catalog component and want to remove it, then execute the ORACLE_HOME/olap/admin/catnoamd.sql script before or after the upgrade. *******************

Check Tag: APEX_UPGRADE_MSG

Check Summary: Check that APEX will need to be upgraded.

Fix Summary: Oracle Application Express can be manually upgraded prior to database upgrade.

Fixup Returned Information:
INFORMATION:> Oracle Application Express (APEX) can be
manually upgraded prior to database upgrade
APEX is currently at version 3.2.1.00.12 and will need to be
upgraded to APEX version 4.2.5 in the new release.
Note 1: To reduce database upgrade time, APEX can be manually
upgraded outside of and prior to database upgrade.
Note 2: See MOS Note 1088970.1 for information on APEX
installation upgrades.

[Pre-Upgrade Recommendations]

******* Dictionary Statistics ******* ****************************

Please gather dictionary statistics 24 hours prior to
upgrading the database.
To gather dictionary statistics execute the following command
while connected as SYSDBA:
EXECUTE dbms_stats.gather_dictionary_stats;
EXECUTE ubitis_stats.gattlet_dictional y_stats,
^^^ MANUAL ACTION SUGGESTED ^^^

******* Fixup Summary ********
3 fixup routines generated INFORMATIONAL messages that should be reviewed.

The opposition in the complete
PL/SQL procedure successfully completed.
SQL>
SQL> ALTER SYSTEM SET PROCESSES=300 SCOPE=SPFILE;
JULY ALIEN STOTEM SET FROOLSSES-SOU SCOPE=SFFILE,
System altered.

Gather dictionary stats

SQL> EXECUTE dbms_stats.gather_dictionary_stats;

PL/SQL procedure successfully completed.

SQL>

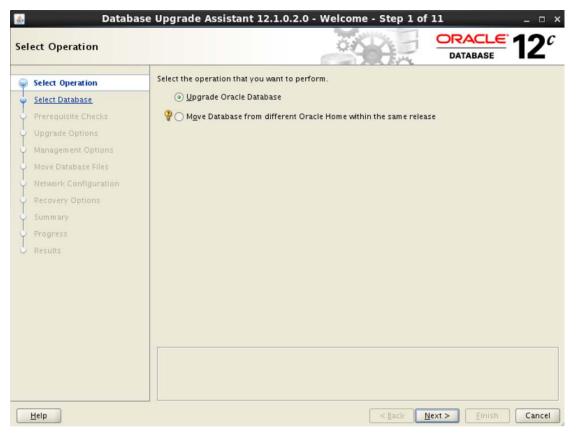

[oracle@ohs3 ~]\$ srvctl start database -d stdby [oracle@ohs3 ~]\$

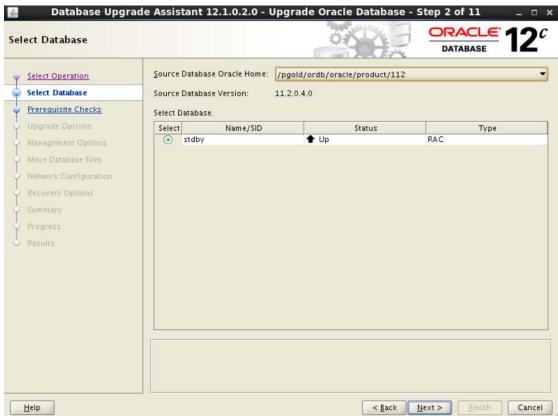

Invoke DBUA

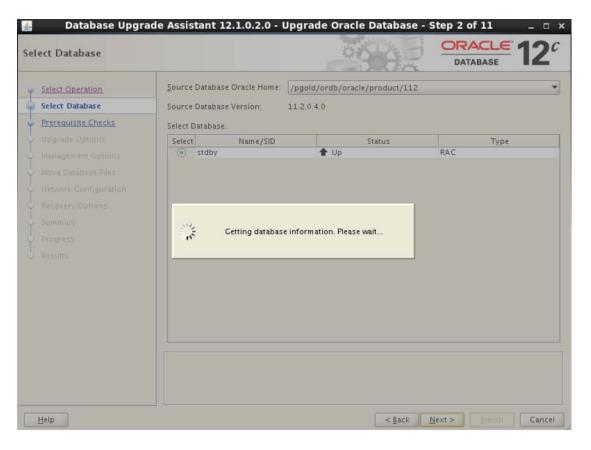

Note: For Oracle RAC, if you upgrade a cluster database using DBUA, then you must set the CLUSTER_DATABASE initialization parameter to TRUE

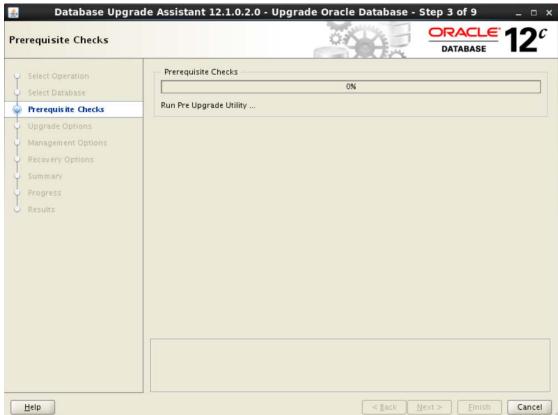

[root@ohs3 Desktop]# xhost +
access control disabled, clients can connect from any host
[root@ohs3 Desktop]# su - oracle
[oracle@ohs3 ~]\$ export DISPLAY=:1.0
[oracle@ohs3 ~]\$ /pgold/ordb/oracle/product/121/bin/dbua

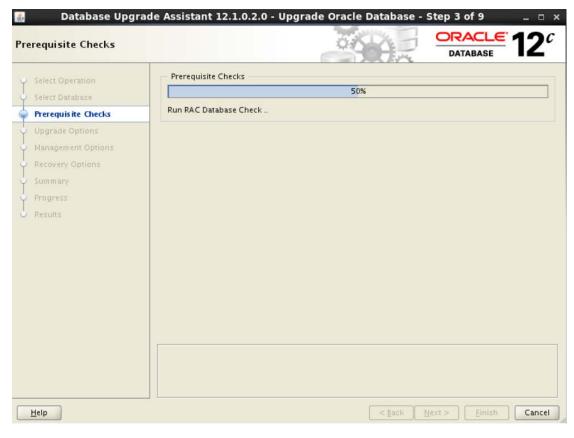

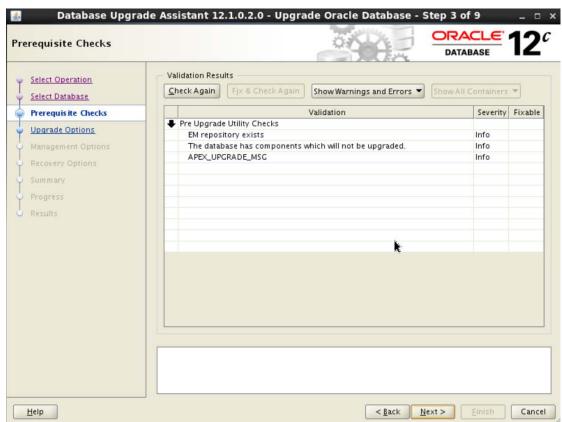

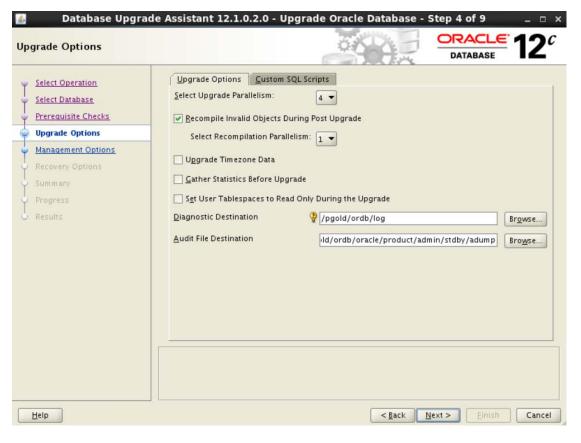

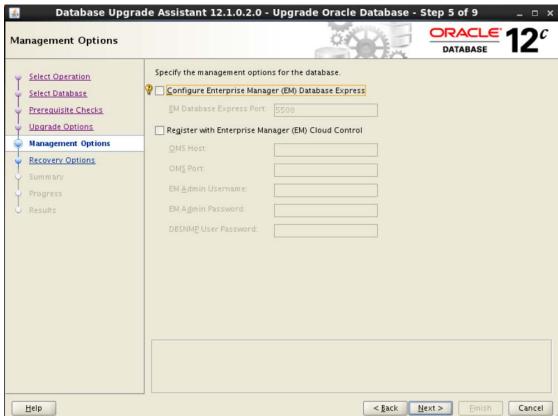

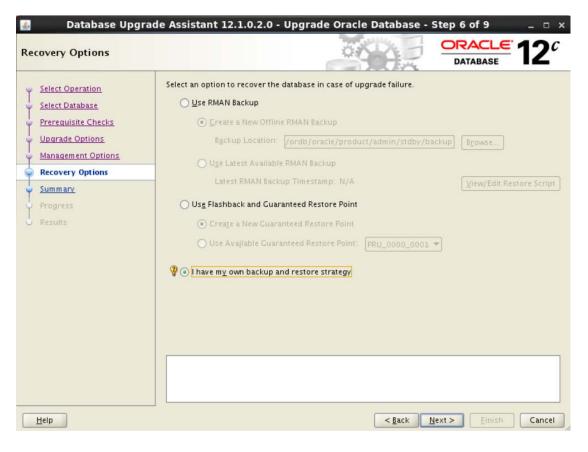

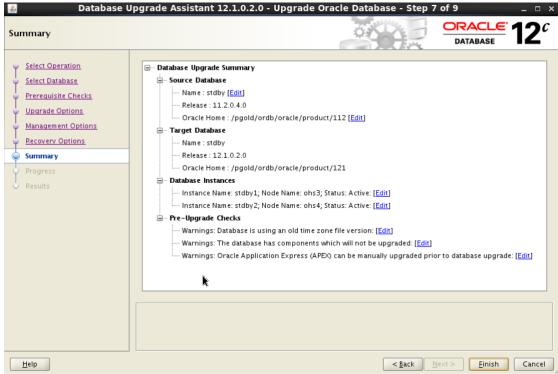

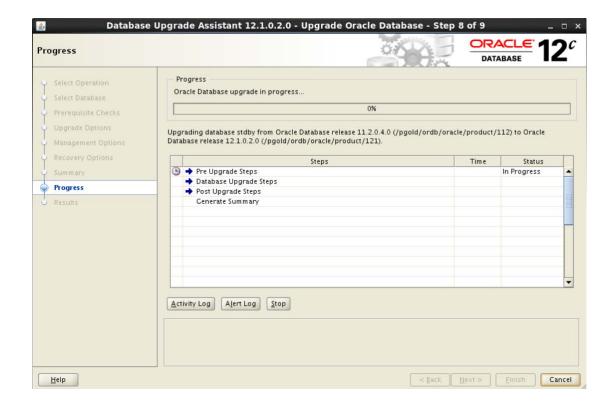

Checking during upgrade process

The DBUA will do follow steps

- Create a new pfile in 12c ORACLE_HOME
- Create new password file
- Set cluster_database= false
- Start instance on node1 and run upgrade processes
- Remove database from 11g ORACLE_HOME
- Add database and register instance with 12c ORACLE_HOME
- Create tnsnames.ora in 12c ORACLE_HOME

[oracle@ohs3 admin]\$ ps -ef|grep pmon

```
